

■ 1.7.9 Rearranging Lists

<code>Sort[list]</code>	sort the elements of <i>list</i> into a standard order
<code>Union[list]</code>	sort elements, removing any duplicates
<code>Reverse[list]</code>	reverse the order of elements in <i>list</i>
<code>RotateLeft[list, n]</code>	rotate the elements of <i>list</i> <i>n</i> places to the left
<code>RotateRight[list, n]</code>	rotate <i>n</i> places to the right
<code>RotateLeft[list], RotateRight[list]</code>	rotate by one position

Functions for rearranging lists.

This sorts the elements of a list into a standard order. In simple cases like this, the order is alphabetical or numerical.

```
In[1]:= Sort[{b, a, c, a, b}]
Out[1]= {a, a, b, b, c}
```

This sorts the elements, removing any duplicates.

```
In[2]:= Union[{b, a, c, a, b}]
Out[2]= {a, b, c}
```

This reverses the list.

```
In[3]:= Reverse[{a, b, c, d}]
Out[3]= {d, c, b, a}
```

This rotates (“shifts”) the elements in the list two places to the left.

```
In[4]:= RotateLeft[{a, b, c, d, e}, 2]
Out[4]= {c, d, e, a, b}
```

You can rotate to the right by giving a negative displacement, or by using `RotateRight`.

```
In[5]:= RotateLeft[{a, b, c, d, e}, -2]
Out[5]= {d, e, a, b, c}
```
