

Listing of Built-in *Mathematica* Objects

■ 0.1 Introduction

This section gives an alphabetical list of all the built-in *Mathematica* objects.

At the end of the section is a list of special input forms.

Much of the information in this section can be accessed directly from *Mathematica*. Assuming that your *Mathematica* implementation or initialization procedure has read in the file `info.m`, you can find information on a built-in object *F* by typing `?F`. Typing `??F` gives you more information on *F*.

Note that all the built-in objects in this listing are in the context `System``.
