

■ Cubics

`Cubics` is an option for `Roots`, `Solve` and related functions which specifies whether explicit solutions should be generated for irreducible cubic equations.

`Cubics` $\rightarrow$ `False` causes irreducible cubics to be left unsolved in their original symbolic form. Numerical solutions can be found by applying `N`. ■ Setting `Cubics` $\rightarrow$ `True` causes explicit solutions to be generated. These solutions are usually very complicated. ■ See also: `Quartics`, `NRoots`.
