

■ And

$e_1 \ \&\& \ e_2 \ \&\& \ \dots$ is the logical and function. It evaluates its arguments in order, giving `False` immediately if any of them are `False`, and `True` if they are all `True`.

`And` evaluates its arguments in a non-standard way (see page ??). ■ `And` gives symbolic results when necessary, and applies various simplification rules to them. ■ When `And` gives a symbolic result, all its arguments are evaluated. ■ See page 73. ■ See also: `LogicalExpand`.
