

■ GegenbauerC

`GegenbauerC[n, m, x]` gives the Gegenbauer polynomial $C_n^m(x)$.

Mathematical function (see Section ??). ■ Explicit polynomials are given for integer n and m . ■ The Gegenbauer polynomials are orthogonal with weight function $(1 - x^2)^{m-1/2}$, corresponding to integration over a unit hypersphere.
■ See page 360. ■ See also: `LegendreP`, `ChebyshevT`.
