

■ If

If [*condition*, *t*, *f*] gives *t* if *condition* is True, and *f* if it is False.

If [*condition*, *t*, *f*, *u*] gives *u* if *condition* is neither True nor False.

If evaluates only the argument determined by the value of the condition. ■ If [*condition*, *t*, *f*] is left unevaluated if *condition* is neither True nor False. ■ If [*condition*, *t*] gives Null if *condition* is False. ■ See page 258. ■ See also: Switch, Which, Condition.
