

■ InverseFourier

`InverseFourier[list]` finds the inverse Fourier transform of a list of complex numbers.

The inverse Fourier transform a_r of a list b_s of length n is defined to be $\frac{1}{\sqrt{n}} \sum_{s=1}^n b_s e^{-2\pi i(r-1)(s-1)/n}$. ■ Note that the zero frequency term must appear at position 1 in the input list. ■ The list of data need not have a length equal to a power of two. ■ See page 465. ■ See also: `Fourier`.
