

■ LCM

$\text{LCM}[expr_1, expr_2, \dots]$ gives the least common multiple of the expressions $expr_i$.

The $expr_i$ may be either integers or polynomials.

$\text{LCM}[expr_1, \dots, \text{Modulus} \rightarrow n]$ evaluates the LCM modulo the integer n .

Integer mathematical function (see Section ??). ■ See page 345. ■ See also: GCD.
