

■ Level

`Level[expr, levelspec]` gives a list of all subexpressions of *expr* on levels specified by *levspec*.

`Level[expr, levelspec, f]` applies *f* to the list of subexpressions.

`Level` uses the standard level specification described on page ??.

- `Level[expr, -1]` gives a list of all “atomic” objects in *expr*.
- See page 175.
- See also: `Apply`, `Map`, `Scan`.
