

■ Modulus

`Modulus`→ n is an option that can be given in certain algebraic functions to specify that integers should be treated modulo n .

Equations for `Modulus` can be given in `Solve` and related functions.

`Modulus` appears as an option in `Factor`, `GCD`, `LCM`. ■ Arithmetic is usually done over the full field $\mathbf{Z}$ of integers; setting the option `Modulus` specifies that arithmetic should instead be done in the finite ring $\mathbf{Z}_n$. ■ Some functions require that `Modulus` be set to a prime, or a power of a prime. ■ See pages 391 and 408.
