

■ NullSpace

`NullSpace[m]` gives a list of vectors that forms a basis for the null space of the matrix m .

`NullSpace` works on both numerical and symbolic matrices. ■ `NullSpace[m, ZeroTest -> test]` evaluates `test[m[[i, j]]]` to determine whether matrix elements are zero. The default setting is `ZeroTest -> (# == 0)&`. ■ See page 448. ■ See also: `RowReduce`, `LinearSolve`.
