

■ ParametricPlot

`ParametricPlot[{fx, fy}, {t, tmin, tmax}]` produces a parametric plot with x and y coordinates f_x and f_y generated as a function of t .

`ParametricPlot[{fx, fy}, {gx, gy}, ..., {t, tmin, tmax}]` plots several parametric curves.

`ParametricPlot` evaluates its arguments in a non-standard way (see page ??). ■ The options that can be given for `ParametricPlot` are the same as for `Plot`. ■ `ParametricPlot` returns a `Graphics` object. ■ See page 117.
