

■ Product

`Product[f, {i, imax}]` evaluates the product $\prod_{i=1}^{imax} f$.

`Product[f, {i, imin, imax}]` starts with $i = imin$. `Product[f, {i, imin, imax, di}]` uses steps di .

`Product[f, {i, imin, imax}, {j, jmin, jmax}, ...]` evaluates the multiple product

$\prod_{i=imin}^{imax} \prod_{j=jmin}^{jmax} \dots f$.

`Product` evaluates its arguments in a non-standard way (see page ??). ■ `Product` uses the standard *Mathematica* iteration specification. ■ The iteration variable i is treated as local. ■ In multiple products, the range of the outermost variable is given first. ■ See page 69. ■ See also: `Do`, `Sum`, `Table`.
