

■ Beta

`Beta[x, y]` gives the Euler beta function $B(x, y)$.

`Beta[a, x, y]` gives the incomplete Beta function $B_a(x, y)$.

Mathematical function (see Section ??). ■ $B(x, y) = \frac{\Gamma(x)\Gamma(y)}{\Gamma(x+y)} = \int_0^1 t^{x-1}(1-t)^{y-1}dt$. ■ $B_a(x, y) = \int_0^a t^{x-1}(1-t)^{y-1}dt$. ■ See page 363.
