

■ TagSet

$f/: lhs = rhs$ assigns rhs to be the value of lhs , and associates the assignment with the symbol f .

You can associate a particular transformation rule with any of the symbols that appear in it. ■ A common case is

$f: h[f[args]] = rhs$. ■ You can see all the rules associated with a particular symbol by typing `?symbol`. ■ If f appears several times in lhs , then $f/: lhs = rhs$ associates the assignment with each occurrence. ■ See pages 208 and 574. ■ See also: `Set`, `UpSet`.
