

■ Ticks

`Ticks` is an option for graphics functions that specifies tick marks for axes.

`Ticks` -> `None` specifies that no tick marks should be given. ■ `Ticks` -> `Automatic` specifies that tick marks should be chosen automatically. They are usually placed at points whose coordinates have the minimum number of digits in their decimal representation. ■ `Ticks` -> `{xticks, yticks}` specifies tick marks for different axes. Each specification is `None`, `Automatic`, or an explicit list of tick mark positions. ■ `Ticks` can be used in both two- and three-dimensional graphics. ■ See page 109. ■ See also: `Axes`, `AxesLabel`.
