

■ Zeta

`Zeta[s]` gives the Riemann zeta function $\zeta(s)$.

`Zeta[s, a]` gives the generalized Riemann zeta function $\zeta(s, a)$.

Mathematical function (see Section ??). ■ $\zeta(s) = \sum_{k=1}^{\infty} k^{-s}$. ■ $\zeta(s, a) = \sum_{k=0}^{\infty} (k+a)^{-s}$, where any term with $k+a=0$ is excluded. ■ See page 364. ■ See also: `PolyLog`, `LerchPhi`.
