

■ ColumnForm

`ColumnForm[{ $e_1$ ,  $e_2$ , ...}]` prints as a column with e_1 above e_2 etc.

`ColumnForm[list, horiz]` specifies the horizontal alignment of each element.

`ColumnForm[list, horiz, vert]` also specifies the vertical alignment of the whole column.

Possible horizontal alignments are:

`Center` centered

`Left` left justified (default case)

`Right` right justified

■ Possible vertical alignments are:

`Above` the bottom element of the column is aligned with the baseline

`Below` the top element is aligned with the baseline (default case)

`Center` the column is centered on the baseline

■ The first argument of `ColumnForm` can have any head, not necessarily `List`. ■ See page 276. ■ See also: `TableForm`, `MatrixForm`, `Subscripted`, `SequenceForm`
