

■ ContourPlot

`ContourPlot[f, {x, xmin, xmax}, {y, ymin, ymax}]` generates a contour plot of f as a function of x and y .

`ContourPlot` evaluates its arguments in a non-standard way (see page ??). ■ The same options can be specified as for `ContourGraphics`, with the following addition:

`PlotPoints` 15 the number of points in each direction at which to sample the function

■ `ContourPlot` returns a `ContourGraphics` object. ■ See page 134. ■ See also: `DensityPlot`.
